## ● 50-380 STANDARD DISC-LOCK TROLLEY

▲  
50-380 trolley complete

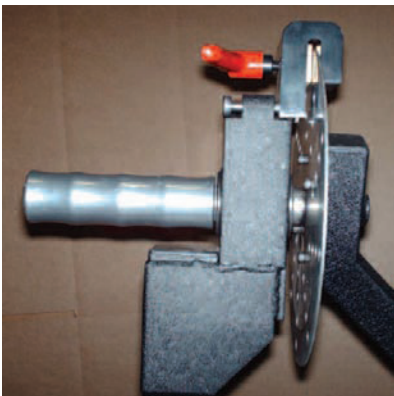

Pro-Cut is pleased to announce availability of the new **50-380 Standard "Disc-Lock" Trolley**. The Disc-Lock design utilizes a dual sealed bearing hub for smooth 360-degree rotation, and a unique lever-operated caliper and cross-drilled rotor for positive locking during the critical adjustment and cut cycles.

A strategically placed aluminum handle offers a convenient way to adjust the camber of the lathe during lathe-to-adapter hook-up.

The trolley comes with the new 50-1057 Accessory Basket to keep the Lug Nut Kit and Tool Kit stored neatly, as well as providing additional storage for other accessories.

The 50-380 Standard Disc-Lock Trolley will ship as standard equipment with all new **PFM 9.0** lathe packages. Purchased separately, the 50-380 works nicely as an upgrade for any Pro-Cut lathe manufactured since 1997.

**Contact the Pro-Cut Service Department with any questions: 800-543-6618.**
